

## Autism and Blindness: Research and Reflections

This book has brought together leading international experts to explore the similarities and the differences between autism and blindness. Current research with children as well as adults is described comparing early psychological development from a range of perspectives such as language, memory, thought and feelings as well as providing critical reviews of educational and intervention programmes. New developments in the field have sparked debate that is well represented here and touches on a variety of issues ranging from musical talent to the basis of connectedness to others. The readership will be drawn from many fields reflecting the interdisciplinary nature of the topic and will include researchers and practitioners in psychology and psychiatry as well as educationalists, therapists, classroom teachers and parents.
