

## Why Science Does Not Disprove God

Based on interviews with eleven Nobel Prize winners and many other prominent physicists, biologists, anthropologists, and psychologists, as well as leading theologians and spiritual leaders, *Why Science Does Not Disprove God* is a well-informed and readable (Wall Street Journal) analysis of the religious implications of our ever-increasing understanding of life and the universe. The renowned science writer Amir Aczel (One of our best science popularizers Publishers Weekly) masterfully refutes the overreaching claims of the New Atheists, providing millions of educated believers with a clear, engaging explanation of what science really says, how there's still much space for the Divine in the universe, and why faith in both God and empirical science are not mutually exclusive.
